RYCOTE

plating system

“Higher Technology Equals Greater Performance”

RYCO is proud to announce that we have developed **RYCOTE** – a new, environmentally friendly plating technology that achieves even greater performance.

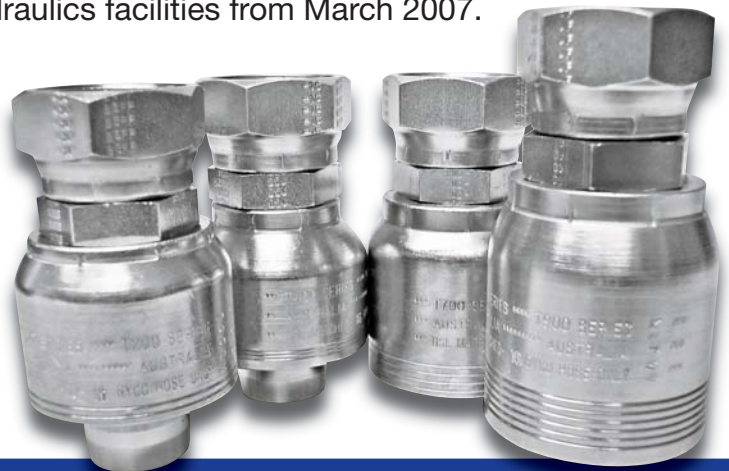

RYCOTE maintains RYCO’s leadership in the industry by complying with the latest European environmental regulations that comes into effect from July 2007; European Directive ELV 2000/53/CE, for the protection of the environment and public health.

Features and Benefits:

- 500 plus hours to RED RUST
- Environmentally friendly
- Lubricated surface
- Silver appearance
- No change to Assembly Procedures
- No change to Assembly Torque values
- Conforms to AS 1789-2003

RYCOTE will be implemented across RYCO Hydraulics facilities from March 2007.

Please note that product may be supplied with a mixture of **RYCOTE** and the previous gold CrVI plating until all stocks of CrVI plated product are consumed. It is not necessary to return existing ‘gold’ stock, as this product will still provide the excellent corrosion-resistance and quality that you have come to expect from RYCO Hydraulics.
