

产品信息公告

With increasing requirements for greater productivity and reliability and the demands of today's equipment and machinery, the robust abrasion resistance of our DIEHARD™ range of hose covers has now become industry standard.

To meet our customer expectations for quality and focus our product development efforts, we are streamlining our range and will discontinue production of the RYCO AVENGER™ cover from July 2015. This stock rationalisation will also make your product management more efficient.

Extreme abrasion resistance

With its synthetic rubber cover, DIEHARD™ is more resistant to abrasion, making it a long-lasting and reliable choice. In fact, DIEHARD's™ outstanding abrasion resistance is more than 10 times greater than the level required by EN 853, EN 856 and EN 857 standards.

Meets all flame resistant requirements

It's also reassuring to know DIEHARD™ complies with the Flame Resistant and Anti-Static (FRAS) requirement of AS 2660 and also meets US MSHA flame resistance requirements.

Reduce your total cost of ownership

DIEHARD™ is designed to keep your equipment performing at its best and given its superior features, you can be confident it will outlast your other hose covers. You'll save on hose replacement costs and minimise the risk of equipment downtime or safety issues.

Switch over to a higher performing hose cover

Our team of product experts will ensure you have the right hose cover for your needs as you transition to DIEHARD™. We're happy to demonstrate how this product will exceed your expectations. If you have more complex transition requirements we can also support your procurement and quality control team as part of your change process.
