## BSPP Female Hose Couplings - Nut Hexagon Size Change

RYCO wish to advise that the Nut Hexagon Sizes (A/F - Across Flats sizes) on our BSPP Female Swivel hose couplings have been revised to conform to relevant international standards ISO 8434-6 and BS 5200. This change has been implemented as a phase-in change at our hose coupling production facilities over the course of February 2017 to June 2017 inclusive.

Table 1 below indicates which RYCO coupling series' and end style terminations have been updated with this Nut Hexagon A/F size alteration.

Table 2 below indicates the Nut Hexagon A/F size prior to and after implementation of the change.
